45	WILMAR FOOD TECHNOLOGY LTD CN

The following information summarizes our progress towards meeting our deforestation-free target in soy supply chain by 2023:

Traceability to country of origin of soybean	96% of the soybean oil sourced in CY 2021 is traceable back to country of origin of the soybean. Countries of origin are: USA, Canada, Brazil, Ukraine, China, Bolivia, Argentina, Serbia, Romania, Croatia, Germany, Austria, Hungary, Greece, Czech Republic, France.
Soybean originated in high risk or unknown origins	25% of the soybean oil sourced by exit 2021 ³ was originated in high-risk or unknown origins. Main high-risk origin was Brazil, followed by Argentina and Bolivia.
Progress on ensuring soy is conversion-free for high-risk origins	<p>52% of soy originated in high-risk origins by exit 2021 was conversion-free via ProTerra certified segregated sourcing.⁴</p> <p>We are actively engaging with our suppliers to develop bespoke solutions for deforestation and conversion-free soy in the remaining part of our supply chain through contracts cover with suppliers i.e. special agreement with CJ Selecta aiming to work with their suppliers to increase traceability in the supply chain and achieve a fully deforestation free facility.</p>

² The disclosed information is based on UL internal reporting systems and a third-party traceability assessment conducted by Proforest on our soybean oil suppliers for CY2021.

³ Exit 2021 refers to Q42020 sourcing data

⁴ 100% of our global soybean oil footprint is covered by a combination of third-party certifications, own impact programs and RTRS certificates from our own program in Southern Cerrado.
